

Backflow Prevention Inspections

The City of Henderson Utility Services Department is tasked with protecting the Cities water supply. To this end, backflow prevention assemblies are required.

The Backflow Assembly Prevention (3011) inspection and Certificate of Occupancy Regulatory Programs (9497) are new inspection codes added to certain permits; however, these inspections are not new. Previously these inspections were performed with the Certificate of Occupancy – Meter Services (9498) inspection.

The Backflow Assembly Prevention inspection (3011) should be scheduled by the contractor when the assembly is installed. The Certificate of Occupancy Regulatory Programs (9497) inspection will be scheduled by the City with the other Certificate of Occupancy inspections.
